

Websites: what, why and how

```
graph TD; A[Websites: what, why and how] --- B[We will document the course on personal websites]; A --- C[In order to encourage the flow of information between courses - you learn for previous years, and share what you learn for the next.]; A --- D[However you like, We recommend WIX – free, easy to use.];
```

We will document the course on **personal websites**

Documentation includes:

Visual (video, photo)

Textual (explanations, ideas, thoughts, complications and overall process)

Connections (links, references)

In order to encourage the flow of information between courses - you learn for previous years, and share what you learn for the next.

Additionally, **we evaluate your work through your website.**

However you like,
We recommend WIX – free, easy to use.

Each week you must upload your work and process to your site.

הקוד נמצא בGITHUB

מה טוב בזה:
מעניין, מורכב, ברור, מעבר נוח ליצירת קשר, מעיד על אישיות

מה פחות:
מאוד לינארי

<https://bruno-simon.com/>

מה טוב בזה:

כיף, מעניין, מורכב, הרבה אינפורמציה (עולם אין סופי), מעיד על אישיות

מה פחות:

לוקח זמן, לא בטוח שכולם יגיעו לכל המידע

sharpen

Drawsheet with burr cut

Tenon lock

Thermal wood modification

Neon glass bubbles

Horizontal stepped spigot

Arch structuring

Round braids

Delignify

<https://materialarchiv.ch/de/?type=all>

מה טוב בזה:

מסודר ונוח, הרבה אינפורמציה, נוח לשימוש וחיפוש, פורמט אחיד להצגת מידע בצורה בהירה.

מה פחות:

אין היררכיה - בגלל שהאתרים שלכם יהיו של תהליך, צריך יותר היררכיה וסדר על צירי זמן

Lab Websites and Similar Courses

Application

Schedule

09/06: introduction, computer-aided design
recitation (9/07 5:00-6:00): parametric design (video)
09/13: project management, computer-controlled cutting
recitation (9/14 5:00-6:00): version control (video)
09/20: embedded programming
recitation (09/21 5:00-6:00): AI (video)
09/27: 3D scanning and printing
recitation (9/28 5:00-6:00): electronics (video)
10/04: electronics design
recitation (10/05 5:00-6:00): EDA (video)
10/11: electronics production
recitation (10/19 5:00-6:00): how to debug (almost) anything (video)
10/18: molding and casting
recitation (10/12 5:00-6:00): CAM (video)
10/25: computer-controlled machining
recitation (10/26 5:00-6:00): sustainable materials (video)
11/01: input devices
recitation (11/02 5:00-6:00): signal processing (video)
11/08: output devices
recitation: (11/09 5:00-6:00): artificial muscles (video)
11/15: networking and communications, midterm review
recitation (11/16 5:00-6:00): embedded architectures, device profiles (video)
11/22: interface and application programming
recitation (11/27 5:00-6:00): machine building (video)
11/29: mechanical, machine design
recitation (11/30 5:00-6:00): machine building (video)
12/06: wildcard week
recitation (12/7 5:00-6:00): why make (almost) anything (video)
12/08: final assignments/orders
12/13: project development
12/19: project presentation
prep: 9:00-1:30
final exam: 1:30-4:30
open house: 5:00-6:30

אתר קורס - how to make almost anything

מה טוב בזה:
מסודר, הרבה אינפורמציה

מה פחות:
לא מעוצב, לינארי

Approach

Ultimaker 3D printers with print beds limited to 8.8"x10.5", at the Autodesk Technology Center, were used to explore two different techniques of 3D printing on fabric to add new dimensions to the material.

- 1- By printing a precise 2-dimensional pattern, a shape can self-transform after being released from the machine. By changing the pattern design and thickness of the 3D printed layer on stretched textiles, then released after printing, students explored how to design pre-programmed shapes out of two-dimensional design and fabrication process. The combination of stretch fabric and printed patterns offers both flexibility and stability.
- 2- By printing on the flexible materials (Fabric), rigidity is added to specific locations. By distributing flexibility and rigidity on a surface, different pre-designed shapes out of 2d surfaces are explored.

Guidelines:

1. Document the work **process** and not just the product (**think of the the site as a learning log**) - conceptual development, trials, difficulties, failures and solutions.
2. The documentation should be **textual** (verbal explanation of the process and learning) and **visual** (images, videos and files).
3. You can use and learn from existing projects, if so you should refer to them and describe what you changed / learned from them.
4. The site should be in English, and needs to be **updated every week**.
5. The site must include a **homepage + a separate page for each task** with its own explanation.
